2. Anne owns a taxi company.

Anne uses this formula to work out the total cost, in pounds, of each taxi journey.

$$\text{total cost} = \text{£}1.50 \times \text{number of miles} + \text{£}1.20$$

Bob goes 2 miles in one of Anne's taxis.

John uses this formula to work out the total cost, in pounds, of each taxi journey.

$$\text{total cost} = \text{£}1.80 \times \text{number of miles} + 50\text{p}$$

Sharita used one of John's taxis for a journey.

The total cost was £9.50.

- (b) How many miles was Sharita's journey?

$$\text{£}9.50 = \text{£}1.80x + 50\text{p}$$

The entrance to the car park is 2.1 metres high.

Can the lorry driver safely drive the lorry into the car park?

You must clearly show how you got your answer.

(a) How much does Kalinda pay for each unit of electricity she uses up to a total of 60 units?

$$£15 \div 60 = £0.25$$

$$25 \text{ p} \\ (2)$$

Kalinda could change to Tariff B.
Here is the monthly charge for Tariff B.

20p per unit of electricity used

$$\begin{aligned} 0 \text{ units} &= 0\text{p} \\ 1 \text{ unit} &= 20\text{p} \\ 20 \text{ units} &= 400\text{p} = £4 \\ 100 \text{ units} &= 2000\text{p} = £20 \\ 140 \text{ units} &= 2800\text{p} = £28 \end{aligned}$$

On average, Kalinda uses 90 units of electricity each month.
Kalinda wants to pay the least amount of money for the units of electricity she uses.

These are the two ways he can pay for the water he uses.

Water Meter	No Water Meter
A charge of £28.20 per year	A charge of £107 per year
plus	
91.22p for every cubic metre of water used	
1 cubic metre = 1000 litres	

Henry uses an average of 180 litres of water each day.

Henry wants to pay as little as possible for the water he uses.
Should Henry have a water meter?

$$180 \times 365 = 65,700 \text{ litres.}$$

$$\div 1000$$

$$= 65.7 \text{ cubic metres.}$$

$$\times 91.22 \text{ p.}$$

$$= 5993.154 \text{ p.}$$

$$= £59.93154$$

$$+ £28.20$$
